

Human Growth and Development During Pregnancy & Early Fetal Development Through Ultrasounds

An Overview

Purpose of Videos

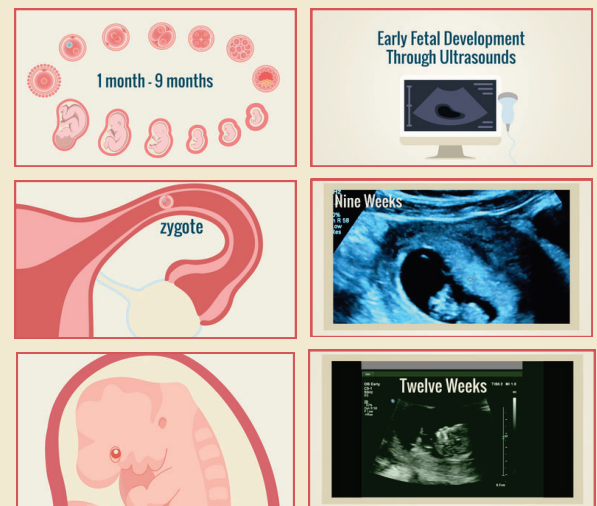

Health Care Education and Training (HCET) developed the Human Growth and Development During Pregnancy and Early Fetal Development Through Ultrasounds videos as optional resources to help schools satisfy statutory requirements around human growth and development education.

This project was initiated in response to requirements in state legislation. The videos were designed as medically accurate instructional tools that educators can confidently use as part of their approved curriculum when this content is taught. It is intended for educators to use with their students during human growth and development, health, or human sexuality education instruction.

While this video was designed in response to specific state legislation, no content is state specific, and educators anywhere are invited to use this in their instruction, consistent with the terms of use.

What's Included

- A clear presentation of human growth and development during pregnancy, explaining biological processes from fertilization through prenatal development using medically accurate information and visual representation.
- High quality visual materials, including computer generated illustrations and animations that show fertilization and stages of fetal development.
- 3 minutes of ultrasound imagery that demonstrates early fetal development and helps illustrate how pregnancy progresses.

Who Developed and Reviewed the Videos

The video was developed and reviewed by a multidisciplinary team that includes OBGYN/maternal fetal medicine physicians, a women's health nurse practitioner, a pediatrician, social workers, and health educators. HCET's role in the creation of this video is to support the implementation of human growth and development education.
